FOR IMMEDIATE RELEASE

February 10, 2004

8th International Symposium on the Maillard Reaction

InLight Solutions is an official co-sponsor of the 8th International Symposium on the Maillard Reaction, the premier event for international exchange of research data and ideas concerning the Maillard reaction in humans.

The measurable phenomena associated with the Maillard reaction, namely increased cross-linking and associated fluorescence of extracellular proteins, enable scientists to better understand the aging process. Acceleration of these reactions is implicated in the development of diabetic complications.

InLight Solutions anticipates that its ability to measure Maillard reaction variables with its custom spectrometers will contribute to novel applications for scientific discoveries that are unfolding today. The Company's noninvasive optical spectrometers are currently used in diabetes screening research. InLight Solutions' support of this meeting underscores the Company's commitment towards the development of products to help detect and manage diabetes.

The Maillard Conference will be held in Charleston, South Carolina August 29 – September 1, 2004. For more information on attending the conference please visit <http://maillard.sc.edu/registration.htm> on the web.
